

This guide was created following the third edition of [The ACS Style Guide: Effective Communication of Scientific Information](#) (2006).

Citing in-text

Although ACS style allows for different in-text citation styles, the most common method is to use a number to refer to your sources. The references at the end of the paper will then be listed in the order in which they appear in the text.

Example: Oscillation in the reaction of benzaldehyde with oxygen was reported previously.¹ Further oscillations were reported to be very systematic.²

Journal article: General format

Author, A. A; Author, B. B. *Journal Abbr.* **Year**, *volume*, pagination.

Note: In ACS style, all journal titles are abbreviated according to the [Chemical Abstracts Service Source Index](#) (CASSI). Article titles are not required in citations.

Single author

Klingler, J. *Chem. Mater.* **2005**, 17, 2755-2768.

Multiple authors

For 2-10 authors, list all names. For 10+ authors, list the first 10 followed by a semicolon and "et al."

Deetlefs, M.; Hardacre, C.; Nieuwenhuyzen, M.; Sheppard, O.; Soper, A. K. *J. Phys. Chem. B.* **2005**, 109, 1593-1598.
